## Software Engineer – Cloud / Distributed Systems

---

Results-driven software developer with 4+ years of experience building scalable, production-grade backend and cloud applications. Proficient in Java, Python, and AWS, with solid foundations in data structures, algorithms, and distributed systems. Passionate about designing reliable, high-performance services that impact customers and improve system scalability.

## Experience

---

### Technology Developer

Purolator

Nov 2023 – Present

Mississauga, ON

- Designed and developed scalable serverless services using AWS **Lambda**, **API Gateway**, **S3**, and **DynamoDB**, improving efficiency of shipment processing and enabling real-time customer-facing tracking.
- Optimized **high-throughput REST APIs** (tracking, estimates, pickup, shipment, label) — sustaining 10M+ daily requests with near-zero downtime.
- Enhanced distributed system reliability by introducing resilient event-driven pipelines using **SNS** and **SQS**, improving **message durability** and **reducing data loss risk** during spikes.
- Strengthened security architecture with custom **Lambda authorizers** integrating **OKTA** tokens and x-api-keys, reducing unauthorized access by 60%.
- Used AI-assisted tools to analyze CloudWatch logs, traces, and error patterns, improving debugging efficiency in serverless and event-driven systems.
- Collaborated in **cross-functional teams**, leading code reviews, improving test coverage, and following software engineering **best practices** for maintainability and scalability.

### Software Developer

Amdocs

Oct 2021 – Mar 2023

Toronto, ON

- Developed and maintained **distributed microservices** for account, subscription, and payment management using **Java (Spring Boot)** and **MySQL**, achieving a 30% performance gain and 50% reduction in production errors.
- Built asynchronous communication systems leveraging **Apache Kafka**, **Avro**, and **Schema Registry**, ensuring reliable, scalable inter-service event streaming and reduced latency during heavy load.
- Contributed to real-time and batch data processing pipelines via **Spring Cloud Data Flow** to support analytics and business reporting.
- Containerized and deployed services via **Docker** and **Kubernetes**, automating scaling on AWS and improving deployment speed by 60%.
- Proactively troubleshooted production issues using **Kibana** and **Elasticsearch** to maintain system stability and improve user experience.

### Business Analytics Developer

Halifax Regional Municipality

May 2021 – Sep 2021

Halifax, NS

- Designed Power Apps and Power BI solutions integrated with SQL Server, reducing manual data collection time by 50% and enhancing data-driven decision-making across teams.

### Technology Product Center Intern

iQIYI, Inc.

Oct 2018 – Mar 2019

Chengdu, China

- Contributed to machine learning pipelines for facial recognition using Python, supporting data preprocessing, model evaluation, and accuracy optimization across 100K+ video samples.

## Education

---

### Dalhousie University

Master of Applied Computer Science

Halifax, NS

Jan 2020 – Sep 2021

### Xiangtan University

Bachelor of Software Engineering

Xiangtan, China

Sep 2015 – Jul 2019

## Skills & Certifications

---

**Languages & Frameworks:** Python, Java, Spring Boot, Maven, MySQL, Groovy

**Cloud & DevOps:** AWS (Lambda, API Gateway, DynamoDB, IAM, SQS, SNS), Docker, Kubernetes, Jenkins, GitHub Actions

**Messaging & Distributed Systems:** Apache Kafka, Schema Registry, RESTful APIs, Event-driven Design

**Monitoring & Tools:** Elasticsearch, Kibana, SonarQube, Postman, Swagger, Terraform

**Practices:** System Design, CI/CD Pipelines, Software Scalability, Test-driven Development (TDD)

**Certifications:** **AWS Certified DevOps Engineer – Professional**, **AWS Certified Developer - Associate**, Microsoft Certified: Power Platform Fundamentals
