

Anqi Chen

SENIOR SOFTWARE DEVELOPER | Java / Spring Boot / Microservices / Kafka

Toronto, ON | 437 986 8672 | anqic7@gmail.com | linkedin.com/in/anqichen27 | github.com/onlyanqi

■ PROFILE

Software engineer with 5+ years of experience designing, developing, optimizing, and supporting **high-volume distributed systems and cloud-native applications**. Strong hands-on expertise in **Java, Spring Boot, microservices, REST APIs, Apache Kafka, databases, AWS, and DevOps**. Experienced in **system design, performance engineering, event-driven architecture, API security, production troubleshooting, deployment, and release/change management**. AWS Certified DevOps Engineer - Professional with a **product, DevOps, and architecture mindset**, combining hands-on development with end-to-end ownership of scalable and reliable systems.

■ CORE TECHNICAL EXPERTISE

Languages	Java, Spring Boot, Python, Maven, Groovy, REST APIs
Security	Authentication & Authorization, Okta, OAuth Tokens, API Keys, AWS IAM, Lambda Authorizers
Messaging	Apache Kafka, Schema Registry, Avro, Amazon SQS, Amazon SNS
Distributed Sys.	Microservices, Event-Driven Architecture, Sync & Async APIs, Scalability, High Availability
Databases	RDBMS (PostgreSQL, MySQL, MariaDB), DynamoDB, SQL, Data Modeling, Indexing, Query Optimization
Cloud	AWS, Lambda, API Gateway, WAF, CloudWatch, IAM, Azure
DevOps	Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, CI/CD, Release & Change Management
Observability	Load Testing, Caching, Lambda Performance Tuning, Kibana, Elasticsearch, CloudWatch

■ EXPERIENCE

Technology Developer

NOV 2023 -- PRESENT

Mississauga, ON

Purolator

Own development, technical design, performance, and production support for Digital Shipping Channel services (REST/SOAP APIs) serving **10M+ requests/day**.

- Served as **dev lead** for the async shipment-creation processing pipeline, owning design through production support, built on **AWS Lambda, API Gateway, SNS, SQS, S3, DynamoDB, and AuroraDB**, applying distributed-systems principles to asynchronous processing, failure handling, and scalability.
- Served as **dev lead** for the public shipment estimator (released 2026), owning architecture, implementation, and production support end-to-end from design through launch.
- Designed and implemented **authentication and authorization** for shipping-channel APIs using API Gateway custom Lambda Authorizers integrated with **Okta tokens and API keys**, reducing unauthorized access attempts by 60%.
- Mentored peer developers on **WAF and bot-control** rule design before a dedicated security team existed; the optimized ruleset remains in production protecting shipment-tracking services today.
- Diagnosed and resolved a chain of performance issues in the authorization path, **Lambda secrets-retrieval overhead** and an incorrect **auth-cache key mapping**, improving latency and cache efficiency for high-traffic authorization checks.
- Ran **endurance testing** to expose a database configuration bottleneck under sustained load; retuned configuration and added a targeted **index** to restore read performance and capacity.
- Supported **release and change management**, assessing upstream/downstream impact and preparing rollback plans, while streamlining CI/CD workflows with **GitHub Actions and SonarQube**.

Software Developer

OCT 2021 -- MAR 2023

Toronto, ON

Amdocs

Developed and supported highly available **Java/Spring Boot microservices** for account, subscription, and payment management.

- Implemented distributed messaging using **Apache Kafka, Schema Registry, and Avro** to decouple services and enable scalable asynchronous communication under peak workloads.
- Diagnosed and resolved message-delivery issues in a Kafka-based account-cancellation flow, tracing messages lost to the **dead-letter queue**, tuning the **retry mechanism**, and eliminating **race conditions** between concurrent operations to ensure reliable, idempotent processing.
- Contributed to architectural decisions involving **microservice boundaries, synchronous vs. asynchronous communication, data consistency, failure handling, scalability, and API design**.
- Optimized application and database performance using **Java/Spring Boot and MySQL** improvements, contributing to a **30% performance improvement** and **50% reduction in error rates**.
- Automated application delivery and infrastructure workflows using **Jenkins, Docker, Kubernetes, and AWS**, including auto-scaling to improve resource utilization during peak traffic.
- Investigated complex distributed production issues using **Kibana and Elasticsearch**, tracing failures across services and resolving high-priority incidents to improve system stability.

Business Analytics Developer

MAY 2021 -- SEP 2021

Halifax, NS

Halifax Regional Municipality

- Developed business applications using **Microsoft Power Apps and Azure-integrated services**, connecting workflows with SQL Server through an on-premises data gateway and reducing data collection time by **50%**.
- Built interactive **Power BI** dashboards and reporting solutions to improve operational visibility and support data-driven decision-making.

Technology Product Center Intern

OCT 2018 -- MAR 2019

Chengdu, China

iQIYI, Inc.

- Collaborated with senior machine learning engineers on Python-based data preprocessing and model training for celebrity face recognition, improving model accuracy by **10%** across a dataset of 100K–200K video clips.

■ EDUCATION

Master of Applied Computer Science

JAN 2020 -- SEP 2021

Halifax, NS

Dalhousie University

Bachelor of Software Engineering

SEP 2015 -- JUL 2019

Xiangtan, China

Xiangtan University

■ CERTIFICATIONS

- AWS Certified DevOps Engineer — Professional
- AWS Certified Developer — Associate
- Microsoft Certified: Power Platform Fundamentals
